

ADLENS VR ProOptics

Custom performance optics for VR

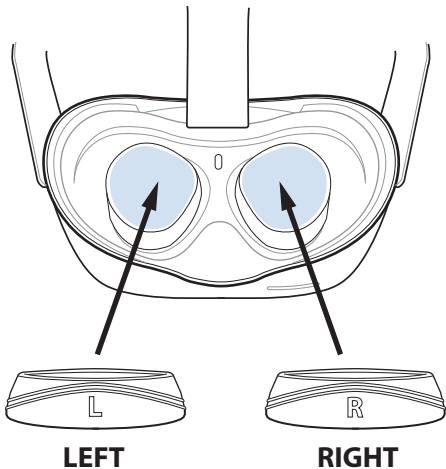

Installation and removal guide
for Oculus™ Quest 2

1

1. Remove the fabric eye shroud from the around the back of the headset. This will allow you to easily install the prescription lens inserts into your headset.

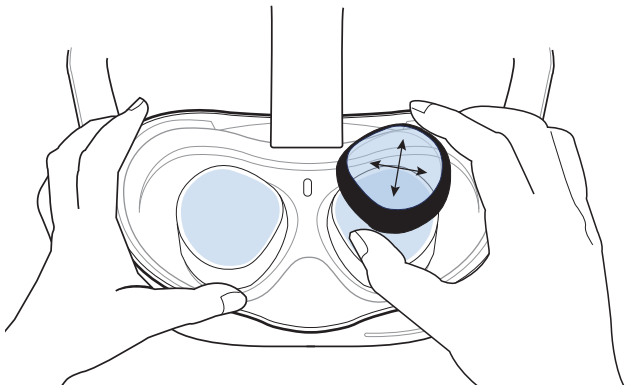

2

2. Select an insert to install, you can identify each lens by the L & R markings on the outer edge.

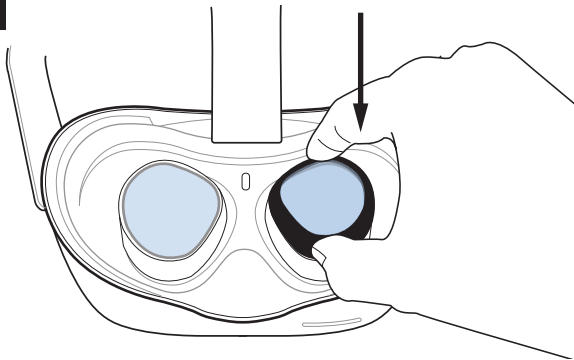

Be sure to match up the correct insert with the correct headset lens as they are customised for each eye.

3

3. First of all, orientate and align the insert to headset lens.

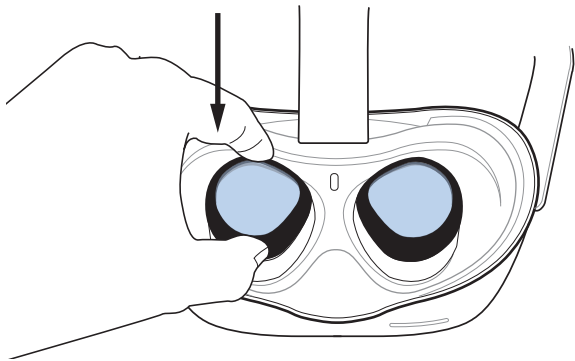

4

4. Once aligned, using the outer edge, firmly press the insert onto the matching headset lens, this will securely seat the insert onto the lens.

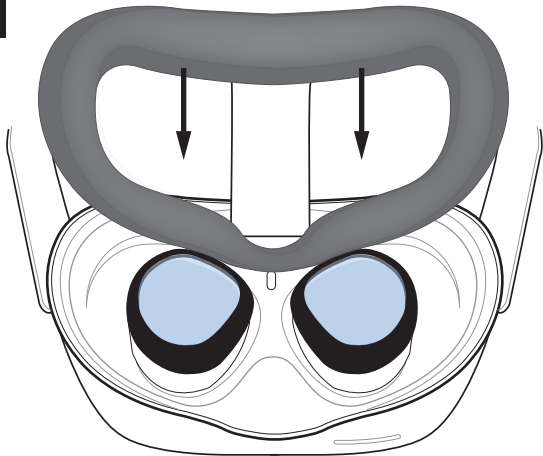

Try to avoid pressing down directly onto the lens itself.

5

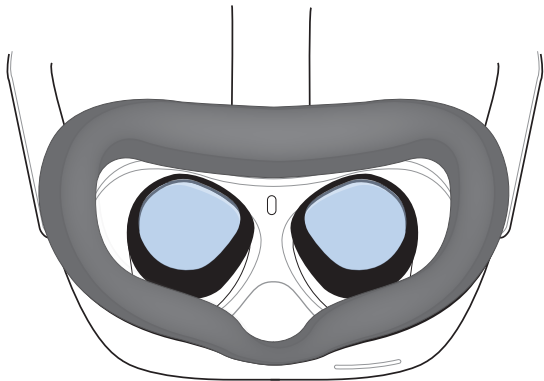

5. Repeat, with the other lens insert.

6

6. Now replace the fabric eye shroud back onto your headset.

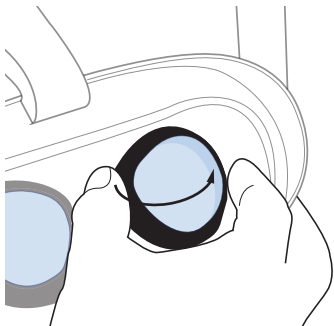

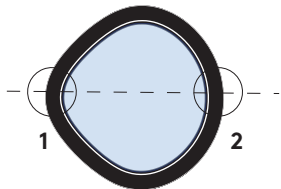

7. Your Adlens VR ProOptics Lens Inserts are now installed. Ready for you to enjoy improved optical performance, comfort and immersion.

Removing the lens insert from the headset.

Using the diagram below (**Fig.A**), position your forefinger and thumb at the two points indicated.

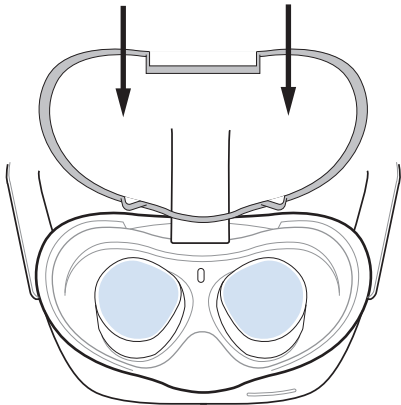

Fig.A

Hold the headset firmly with one hand and place your thumb or forefinger on the undercut in **Position 1** then lever upwards until it unclips. Repeat with the other insert. **Be careful not to touch the lens surface.**

Optional step.

Some users may want to use the spacer for extra space within the headset. For further guidance on how to install the spacer, please refer to your original Oculus Quest 2 documentation.

If you have purchased the Quest 2 Fit Pack. Please note, that you will no longer be able to install the Light Blocker adapters into your Quest 2 headset once you have fitted your Adlens VR ProOptics.
